**Phone: 819 846-2721
Fax: 819 846-7147**

The Brompton Mill was the very first pulp and paper mill acquired by the Kruger Company, in 1950.

The Mill's three paper machines produce high quality newsprint from thermo-mechanical and recycled pulp.

Its deinking facility produces 600 tonnes of de-inked pulp daily to supply both the Brompton Mill and Kruger's Trois-Rivières Mill.

The Brompton Mill complex also includes a 9.9-MW hydro power plant and a 23-MW biomass cogeneration plant.

The mill has a secondary effluent treatment system to ensure its compliance with environmental laws and regulations.

Product Information

Products and annual production capacity:

- newsprint: 300,000 MT
- recycled pulp: 216,000 MT

Furnish:

- thermo-mechanical pulp, recycled pulp

Transportation:

- container, truck, rail
